EDUCATION

BS Computer Science - 4.0/4.0 GPA

California State University, Long Beach

May 2027

Long Beach, CA

Relevant Coursework: DSA, Operating Systems, Object-Oriented Programming, Distributed Computing

EXPERIENCE

SpaceX

Software Engineer Intern

May 2026 – August 2026

Palo Alto, CA

- Consolidated 4 repos into the existing monorepo and deleted 6 apps, cleaning 2 years of technical debt
- Rewrote CI manifest generation and comparison to fix the near 0% accuracy rate of builds for 1,200 engineers
- Migrated OIDC to group based provider and built configuration interface, deleting 9k lines of hardcoded RBAC
- Mentored a new grad in fixing ephemeral cert failures via a stable CA, reclaiming 30 mins on 300 failed PRs a day

CSULB

Undergraduate Researcher – Accepted IEEE ICPADS 2026

January 2026 – Present

Long Beach, CA

- Built Python simulation suite with dependency injection, enabling rapid adaptation to changing requirements
- Parallelized simulation runs by designing thread-safe scenarios, significantly improving execution speed
- Designed and wrote tests for unchanging behavior, protecting the suite from bugs while keeping tests maintainable

Fetch AI

Software Engineer Intern

September 2025 – May 2026

Menlo Park, CA

- Integrated Square into a LangGraph agent in collaboration with coffee shop owners, generating \$2k in sales
- Led 2 interns through task delegation and code reviews, catching and fixing 4 business rule violations pre-launch
- Designed and deployed a multi-tenant ReAct agent serving 25k live hacker queries across 4 hackathons
- Decoupled payment business logic from Django and FastAPI endpoints, then refactored a suite of 70 tests

HTM Coaching

Software Engineer Intern

September 2025 – February 2026

Remote

- Designed a relational schema with Supabase, enabling multi-tenancy, supporting \$20k ARR across 40 tenants
- Developed versioned SQL migration scripts, preserving 100% of data across 300k legacy production records
- Used Next.js prefetching and TanStack Query cache warming to cut tab switch latency from 200ms to 50ms
- Implemented Stripe integration tests (4 happy-path, 5 edge-case) in a CI/CD pipeline, gating production deploys

Bazalu

Software Engineer Intern

May 2025 – August 2025

Long Beach, CA

- Implemented Sentry logging in Next.js and Fastify, found slow queries, and cut latency by 400ms via indexing
- Refactored 75 Fastify RPC endpoints into REST APIs, enabling consistent and structured API versioning
- Integrated pagination controls into search APIs, preventing request-size failures as catalog scaled past 5k items

PROJECTS

1st Place - LAHacks

- Led a team of 5 in building a 5-agent LangGraph system, winning 1st out of 1k competitors and \$2k

2,000+ Users - Binary Tree OSU

- Built a binary tree visualization game with traversal validation, used by 300 new students per semester

SKILLS

Languages: Python, TypeScript, C#, Java, SQL, C++, JavaScript, HTML, CSS, Bash

Frameworks & Backends: React, Next.js, Express.js, Fastify, FastAPI, LangChain, LangGraph, Entity Framework

Databases: PostgreSQL, MongoDB, CockroachDB, Supabase, Firebase, ChromaDB, Pinecone, MySQL

Developer Tools: Git, Docker, Unix, Linux, AWS, Google Cloud, Kubernetes, ArgoCD
